Introduction to ITICnxt

Welcome to ITICnxt – the future of online ticketing.

Online ticketing systems have required users to spend their time entering text information before allowing them to do the all-important work of finding their dig site on a map. As we considered ways to improve the online ticketing process, we became convinced that if users identified their dig site on the map first, nearly all text entry could be automated. As our research in modernizing online ticketing continued, we found other ways to save the user time and effort by building the notification center's business rules into the system.

One of the biggest differences you will notice from the very first time you use ITICnxt is that identifying your dig site starts, not ends, with an aerial photo of your work area. After minimal text entry, easy-to-use tools allow you to specify each individual dig location within your work area. Once you have specified all the work areas, ITICnxt automatically divides or combines them into the appropriate number of tickets, each one complete with text-based location information. That's right: ITICnxt presents you with completed tickets for your review.

We believe ITICnxt will change the way people think about damage prevention. For the very first time, ITIC:

Starts the process with an aerial photo. Use the width of streets, the location of buildings, and the location of other geographic features to help identify where you are digging in relation to the actual conditions at your work site.

Uses the information contained in the notification center's base map. ITICnxt helps you complete your ticket, allowing you to fully concentrate on identifying the precise location where you will dig instead of entering text.

Gives you the means to precisely define the area in which your work will take place. We've eliminated the need to go broad or over-cover your work site. Each excavation site you define will be compared with the notification center's database so only affected operators are notified.

Definition of Terms

Session: A period of user interaction with ITICnxt characterized by defining one or more excavation entities which subsequently results in the creation of one or more tickets.

Excavation Entity: A circle, route, parcel, GPS generated polygon or free-hand polygon representing an area of excavation (see below). The ITICnxt user creates a discrete excavation entity during a session as they identify the limits of an area of work. Users can create as many excavation entities as necessary during a single session.

Route: An excavation entity created when a user selects a series of points on a map that form a continuous line. The line is converted into an excavation entity based on the width specified by the user.

Circle: An excavation entity created when a user selects a point on a map that is then converted into a circle based on the length of the radius requested by the user.

Parcel: An excavation entity created when a user selects part or all of a parcel of property. Parcel size is often associated with a single address and does not include the road right of way. Users can extend parcel size with the parcel tool.

NOTE: Available parcel data may be limited in some areas.

Click the **Create job ticket** menu and select **2 full business days ticket**.

The **My Tickets** module contains a database of all tickets you have filed with your account.

Workflow Process

There are three major steps in the locate filing process:

Step 1 – Mark Location

Here you will locate and map out your work area(s) by drawing one or more shapes on the map (excavation entities).

Step 2 – Write Instructions

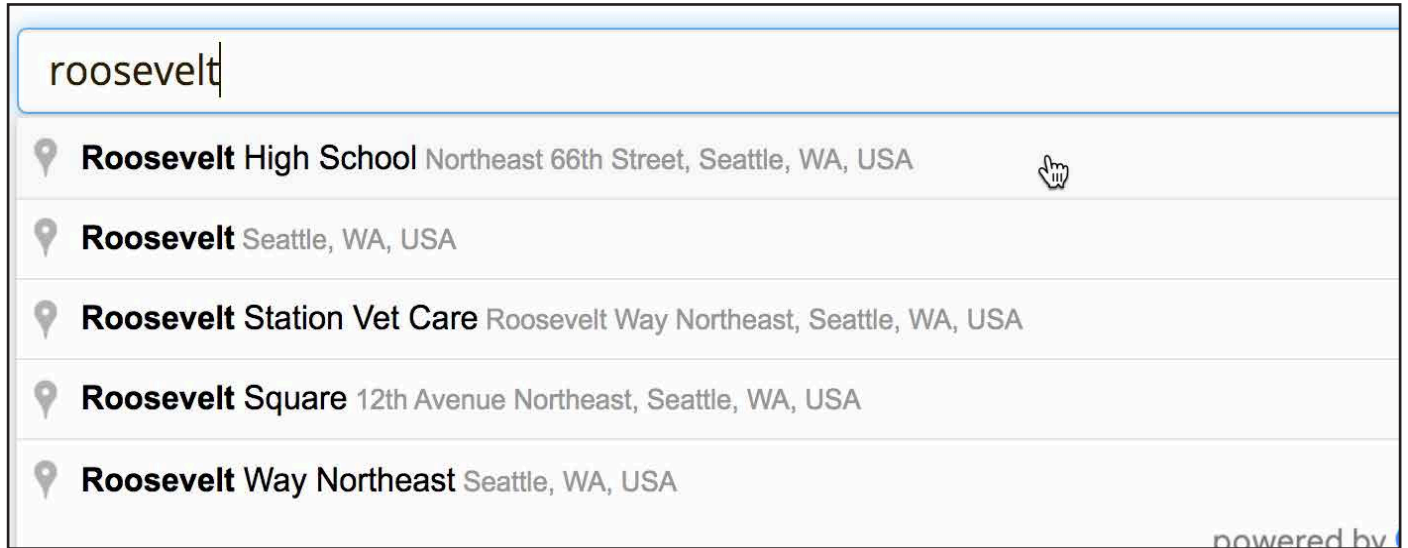

Here you will verify the automatically generated ticket information, and make any additions or alterations as necessary.

Step 3 – Review & Submit

Here you will review all of your ticket information and submit the locate request(s) to be sent directly to the affected facility operators or to the call center for review.

Step 1. Mark Location

First, you will need to find your worksite on the map. Enter an address, building name, or city/place name in the **Search** field.

A screenshot of a search interface. At the top, a search bar contains the text "roosevelt". Below the search bar, a list of search results is displayed, each with a location pin icon, a bolded title, and a full address. The results are:

- Roosevelt High School** Northeast 66th Street, Seattle, WA, USA
- Roosevelt** Seattle, WA, USA
- Roosevelt Station Vet Care** Roosevelt Way Northeast, Seattle, WA, USA
- Roosevelt Square** 12th Avenue Northeast, Seattle, WA, USA
- Roosevelt Way Northeast** Seattle, WA, USA

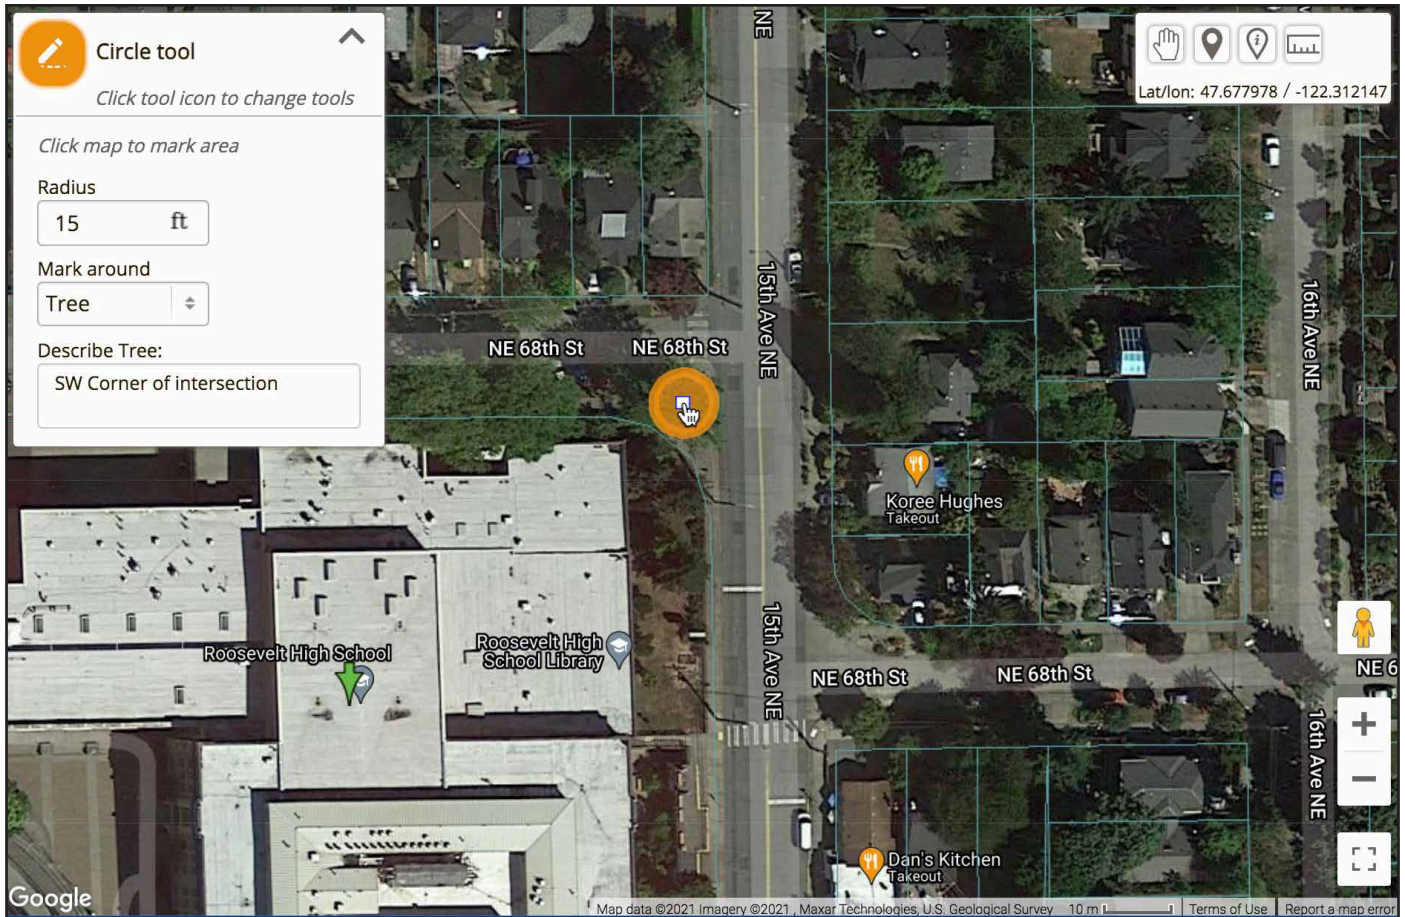

In the bottom right corner of the search results area, the text "powered by" is visible.

Once you have found the correct location, select a drawing tool from the **Drawing Tool** menu.

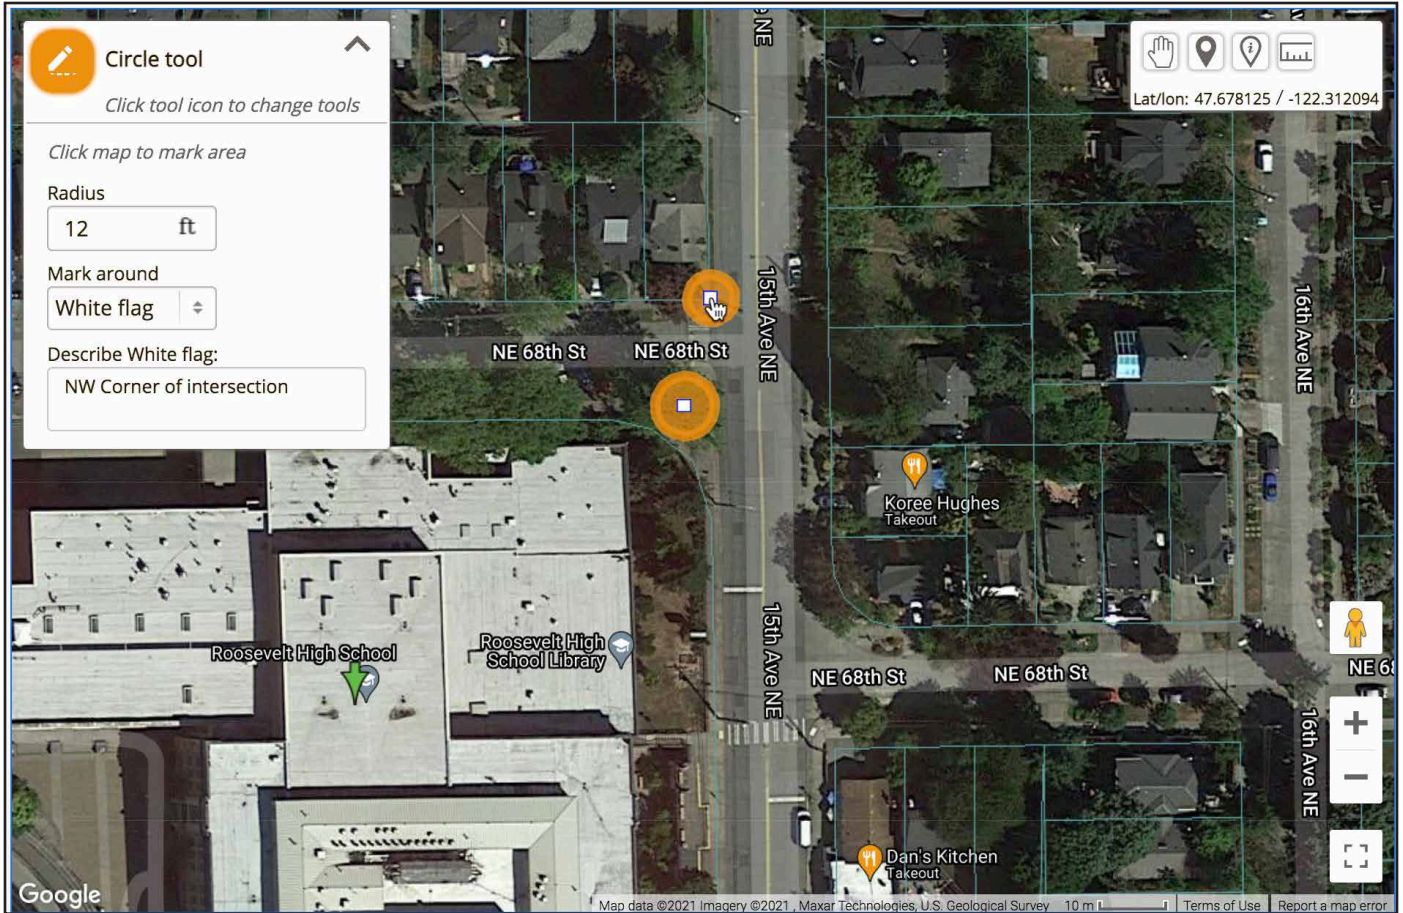

A screenshot of the Drawing Tool menu. The menu is titled "Select the type of work planned" and features an orange pencil icon. Below the title, there are five options, each with a corresponding icon and a brief description:

- Radius excavation**: Planting trees, placing holes, etc
- Route excavation**: Trenching/road repairs
- Property excavation**: Excavation on a specific parcel of land
- Street excavation**: Select existing street(s) on map to create route
- Other**: Define an irregularly-shaped excavation area

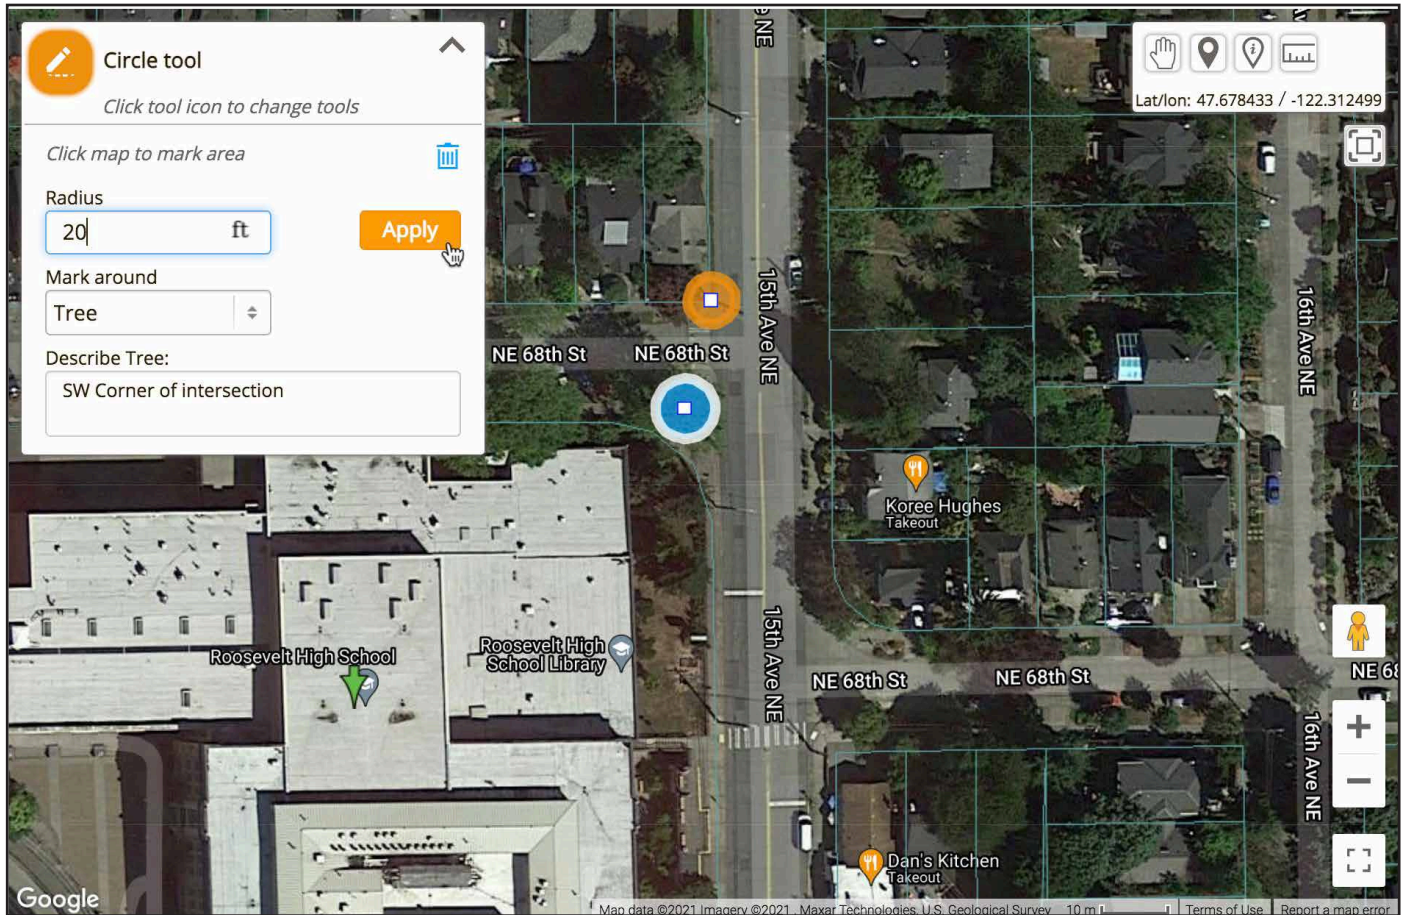

When you select a drawing tool you will be prompted to enter information about the worksite you intend to map out. The required information will vary depending on which tool you choose. Be as accurate as possible.

After entering the required information, place an excavation entity by clicking on the map.

You can continue placing excavation entities on the map. Make sure to update the excavation entity's information if necessary.

If you make a mistake, you can edit or delete any entity in the current session by clicking on it. (You'll need to make sure you don't have a drawing tool selected.)

Click **Apply** to apply your changes to the selected Excavation Entity. Click the  to delete the excavation entity.

When you have finished mapping your worksite(s) click the **Next** button.

This will take you to **Step 2**.

Step 2. Write Instructions

ITICnxt calculates the most efficient way to break up or combine the excavation entities you have created and assign them to locate requests. ITICnxt automatically applies the business rules as established by Dig Safe Washington to make this determination. The tickets appear at the top of the screen. Each tab represents a ticket.

ITICnxt enters **Location Information** based on the excavation entities you drew on the previous page. Carefully review all information in this section, paying particular attention to the **Location of Work** – if ITICnxt has split up your work area into multiple tickets, only describe the area of excavation that corresponds to the mapping on the current ticket/tab.

This is the end of the Quick Start Guide.

Main Menu

Upon logging in to ITICnxt you will be presented with the main ITICnxt menu, as well as your default starting module (My Tickets, Locator Tickets). (See page 21 to see how to change your default module.)

At the top of the screen you can access the ticket search function (formerly Search & Status). As usual, numerous search parameters are available.

The screenshot displays the ITICnxt 'My Tickets' interface. At the top, there is a search bar with 'search all tickets' and a dropdown menu set to 'WA'. A welcome message 'Welcome briancasey@occinc.com' is visible in the top right. A prominent red warning message reads: 'WARNING: This is a test site. Tickets will not be released.' Below this, the 'My Tickets' section includes a 'Duplicate a dig' and 'Create job ticket' button. A summary bar shows ticket counts: 'All released(6) Expiring/expired(6) No response(0) Unreleased(0) Violation reported(0) Design information request(0) Design locate request(0)'. The search filters include 'Released between' (06/29/21 to 07/06/21) and 'Phone' (Numbers). A 'Search by ticket #' field and 'More search options' link are also present. A 'View ticket map' and 'Page settings' link are available. The main table lists tickets with columns: Ticket #, Release date/time, Address/street, Cross Street, Place, County, Start date/time, Type, and Type of work. The table contains 6 entries, with the first one selected. A pagination bar at the bottom shows 'Show 10 entries' and 'Showing 1 to 6 of 6 entries'.

Ticket #	Release date/time	Address/street	Cross Street	Place	County	Start date/time	Type	Type of work

The  button provides access to the **My Tickets** menu, which contains the complete list of tickets filed through your account. This is also where you can Create a New Ticket. (See page 5 for more info.)

The  button provides access to the **Locator Tickets** menu, where you can find a complete list of the Locator Tickets you've received (if any). (See page 38 for more info.)

The  button provides access to the **Reports** menu. (See page 54 for more info.)

The  button provides access to the previous version of ITIC.

The  button will bring up your account settings – the **User Profile, Application Settings,** and **Job Profiles** menus can be accessed through here. You can also choose to **Log Out** from here.

The  button provides access to the **My Messages** page, where you will find any relevant communication from the call center.

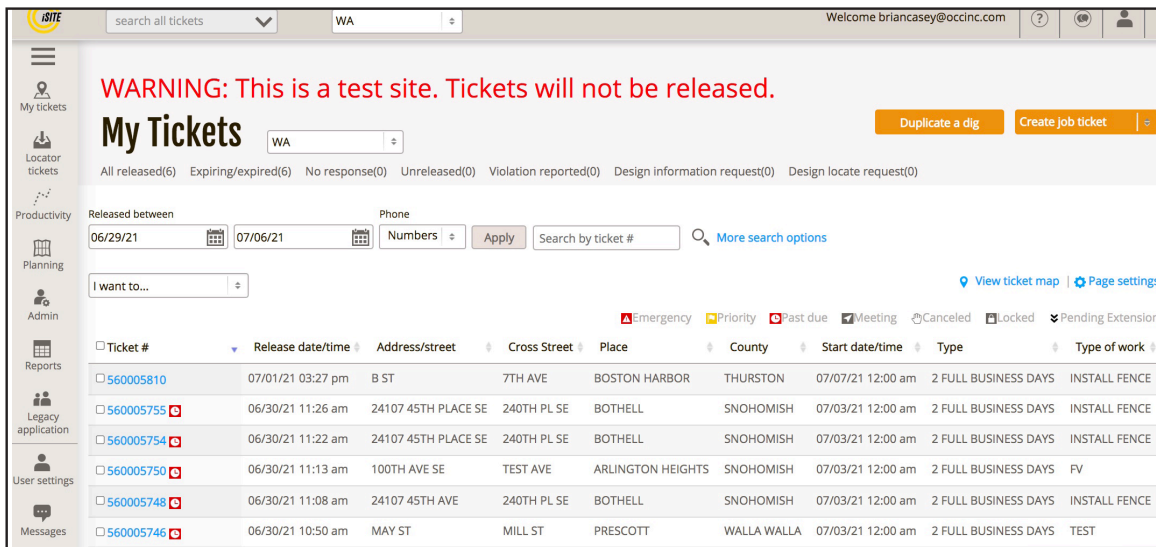

The  button will bring up the **Contact and Help Information** page, where you can find training materials, helpful links and other resources to assist you.

The  button will log you out of ITICnxt.

The  button provides access to Live Help Chat, allowing you to consult with a call center professional directly.

My Tickets Menu

The **My Tickets** menu contains all locate requests you have previously filed. You can filter or sort this list in a number of ways using the menus at the top of the page. The state dropdown menu allows you to navigate between different states you operate in. The date range menu will limit the ticket list to those tickets filed within a specific date range.

Find a specific ticket using the option. Clicking the **More Search Options** link will bring up a list of filtering criteria based on specific information on the tickets, such as the address, street name, or type of ticket.

Clicking [View ticket map](#) will display all currently listed tickets on the map.

Accessing the [Page settings](#) menu will allow you to customize what information is displayed for each ticket in the **My Tickets** menu. Click on a ticket number to view the individual ticket.

The menu allows you to perform ticket actions to multiple tickets in a single session.

To use this function, make sure each relevant ticket is “checked” (e.g. 560005810), then choose the ticket action from the “I want to...” menu. Then click the button that appears next to the “I want to...” menu (e.g.) to begin the process.

Access the menu to begin filing a new locate request. (See page 5 for more info.)

Job Profiles

The Job Profiles feature allows you to create templates that can be used to automatically fill in commonly used information on multiple locate requests. The Job Profiles menu can be accessed through the User Settings menu.

The Job Profiles menu will contain all Job Profiles currently saved to your account.

To create a new Job Profile click the [Create job profile](#) button.

All fields are optional. You can enter as little or as much information as you like. When you have finished filling out all necessary fields click the **Create** button.

Now you can use the new profile when you reach Step 2 (**Write Instructions**) of the ticket creation process. Click the **Select Job Profile** menu found at the top of the Job Description section. Selecting a job profile will automatically fill in relevant fields with the data saved in the job profile you chose.

You can also access the **Manage Profiles** menu by clicking the [Create/edit profiles](#) link. This menu allows you to create, edit or delete job profiles without having to abandon the ticket(s) you are currently working on.

Advanced Mapping

The Map

The map interface is where you will locate and map out your work areas for locate requests. The map contains a number of tools to help you precisely and accurately map out your locate requests.

Starting Address Location

Use this search field to find an address, or the name of a business or municipal building that can serve as the starting point for your excavation(s).

*Advanced/Alternate Search

Use the Advanced Search tool to find locations that do not appear in the Starting Address Search. You can use the drop-down menu to search by more specific address information, coordinates (GPS, Lat/Long, etc.), or the mapping from a previous locate request. (See page 26 for more info.)

Map View Buttons

Change the image of the map to the Call Center map view, Google map view or Satellite view (pictured). Satellite view is the recommended map view when creating excavation entities.

Tool Box

Stop – Clicking this will cease whatever mode you are currently using, such as Measure or Draw Polygon.

Placemark – Place a pin-mark on the map for later reference with this tool. This can be very helpful when used in conjunction with the Measure tool. **NOTE:** Placemarks only last the duration of the session in which they are created.

Identify – Identify map features that do not display a name (such as roads, highways, etc.) with this tool. The name will appear in just above the Starting Address Location search bar, next to “Highlight.” The Identify tool is also useful for identifying the address range of a specific block **NOTE:** Zooming in on the map makes more names visible.

Measure – Use this tool to measure the distance between points on the map. Get in the habit of using this tool regularly to ensure proper coverage of excavation areas and confirm distances along roads. The measurements will appear at the bottom of the Tool Box. “Segment Length” refers to the distance between the last point you placed on the map and your cursor’s current location. “Total Length” refers to the distance between the first point you placed on the map and your cursor’s current location.

Lat/lon – Displays the latitude/longitude coordinates of your cursor’s current location.

Drawing Tool Menu

This drop-down menu contains all of the drawing tools you will need to create excavation entities. (See page 27 for more info.)

Google Street View (“Pegman”)

Click and drag Pegman on to the map to open Google street view.

Zoom In/Out

Use these buttons to zoom in or out on the map.

Full Screen Mode

Click this button to enter full screen mode. Press Esc to exit.

Advanced Search

Use the **Advanced Search** menu (AKA the “**Locate By...**” menu) if you are unable to find your worksite with the Starting Address Location search.

Advanced Street Search – can be used to search for roads and intersections.

Coordinate Search – can be used for latitude/longitude, GPS, and other coordinate type formats.

Grid Search – can be used to search by TRSQ, Mapsco or other map grids.

Prev Ticket Search – can be used to show the excavation entities from previously filed tickets.

Radius Excavation Tool

The **Radius Excavation** tool allows users to create circular excavation entities with a pre-determined radius. The Radius tool is an excellent choice for jobs involving pole installation, tree planting, or any other type of work where a circle best describes the work area. You can create as many circle entities as needed.

First, access the Drawing Tools menu and choose the **Radius Excavation** tool.

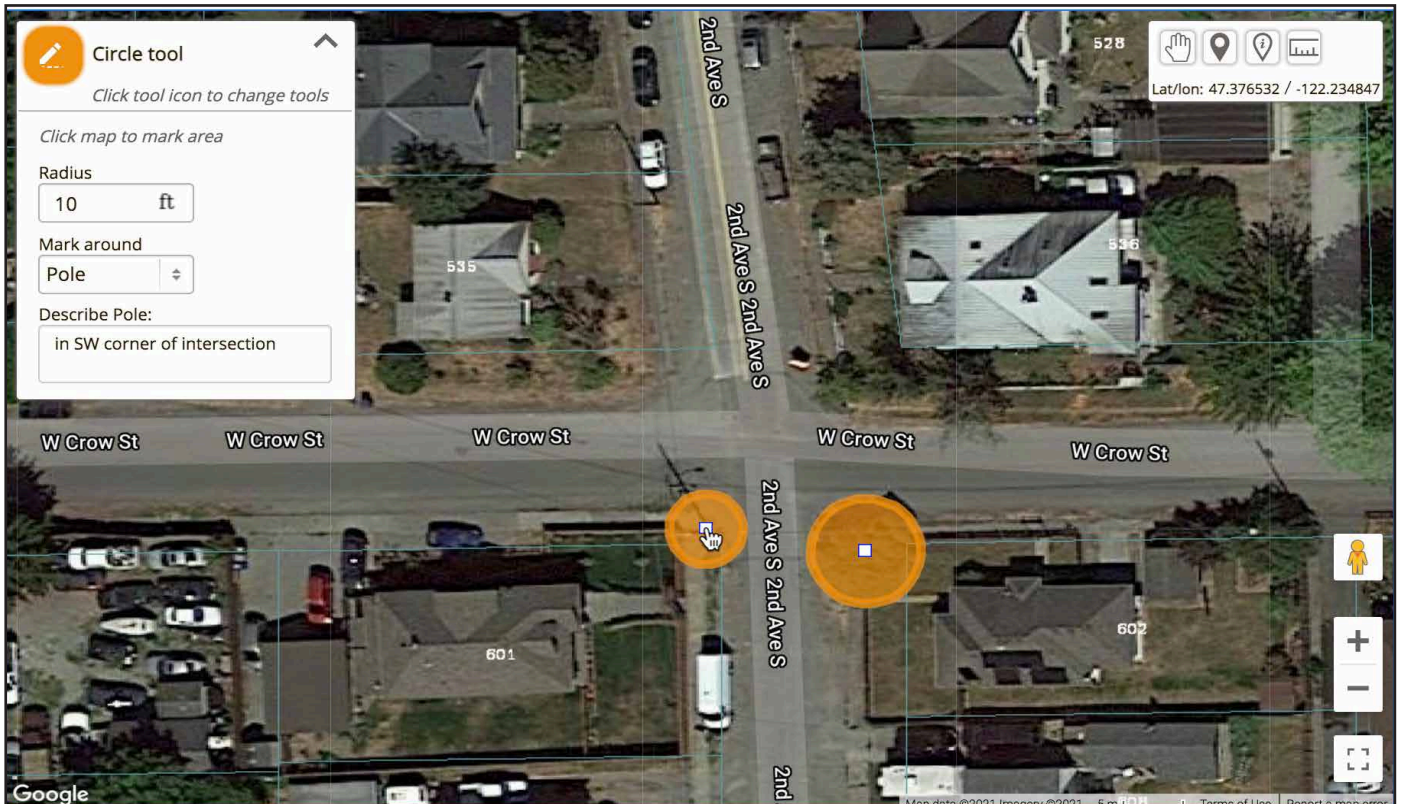

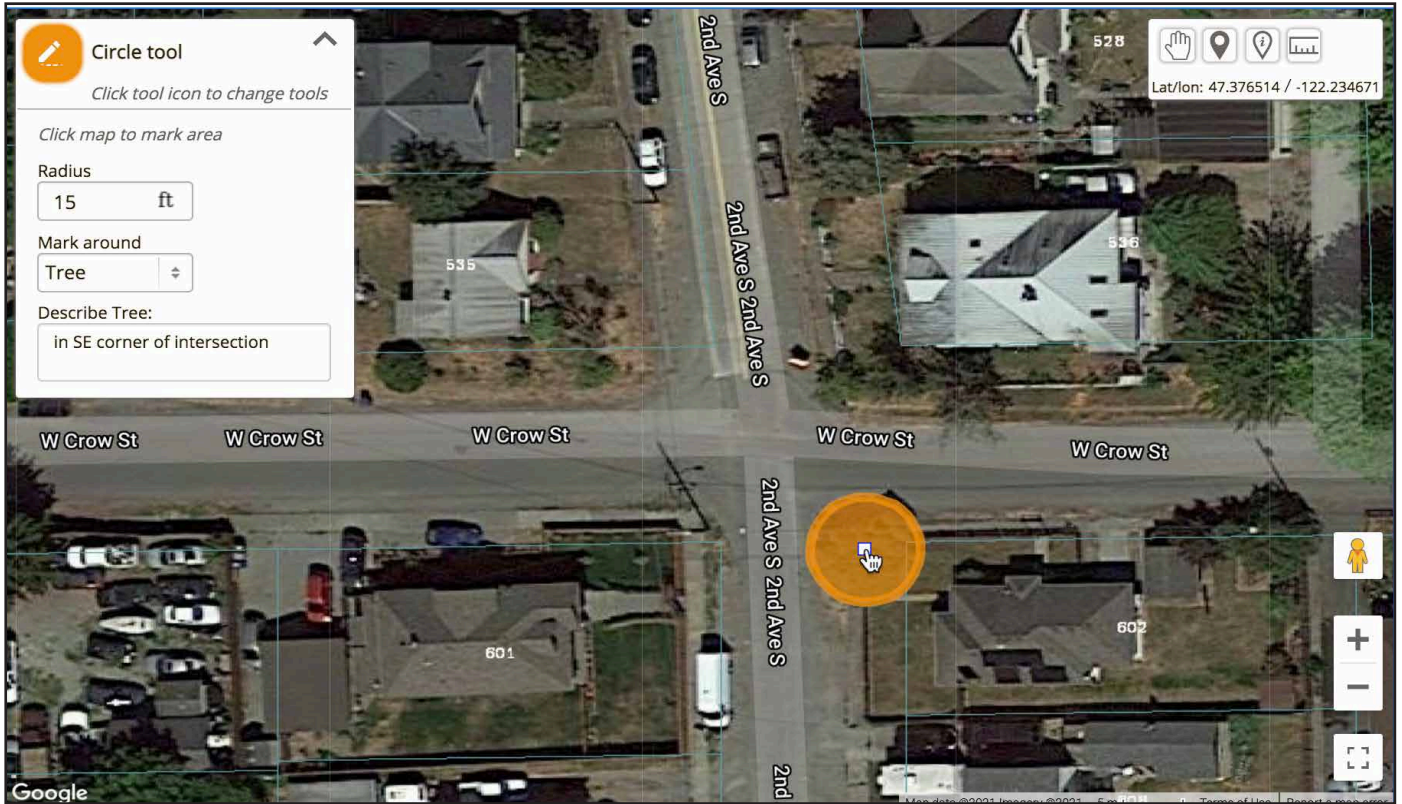

Next, enter the radius (in feet) needed to contain your work site.

Choose an option from the “Around the” drop-down list (if none of the provided options fit your type of excavation, choose Custom Response*).

Now you can place the circle entity by clicking on the map.

You can continue placing circular excavation entities by clicking on the map. Make sure to update the entity’s marking instructions if necessary.

***Custom Response** - The “Around the” drop-down list contains the most popular choices but those choices won’t always fit for the type of work you are performing. If the appropriate object is not present in the drop-down list, choose Custom Response and fill out the Custom Response value field. You will then need to enter details describing the item you listed in the Custom Response field. If you would like this choice to be included in your drop-down list for future tickets, place a check in the Save response box. Then click the Save button.

Route Excavation Tool

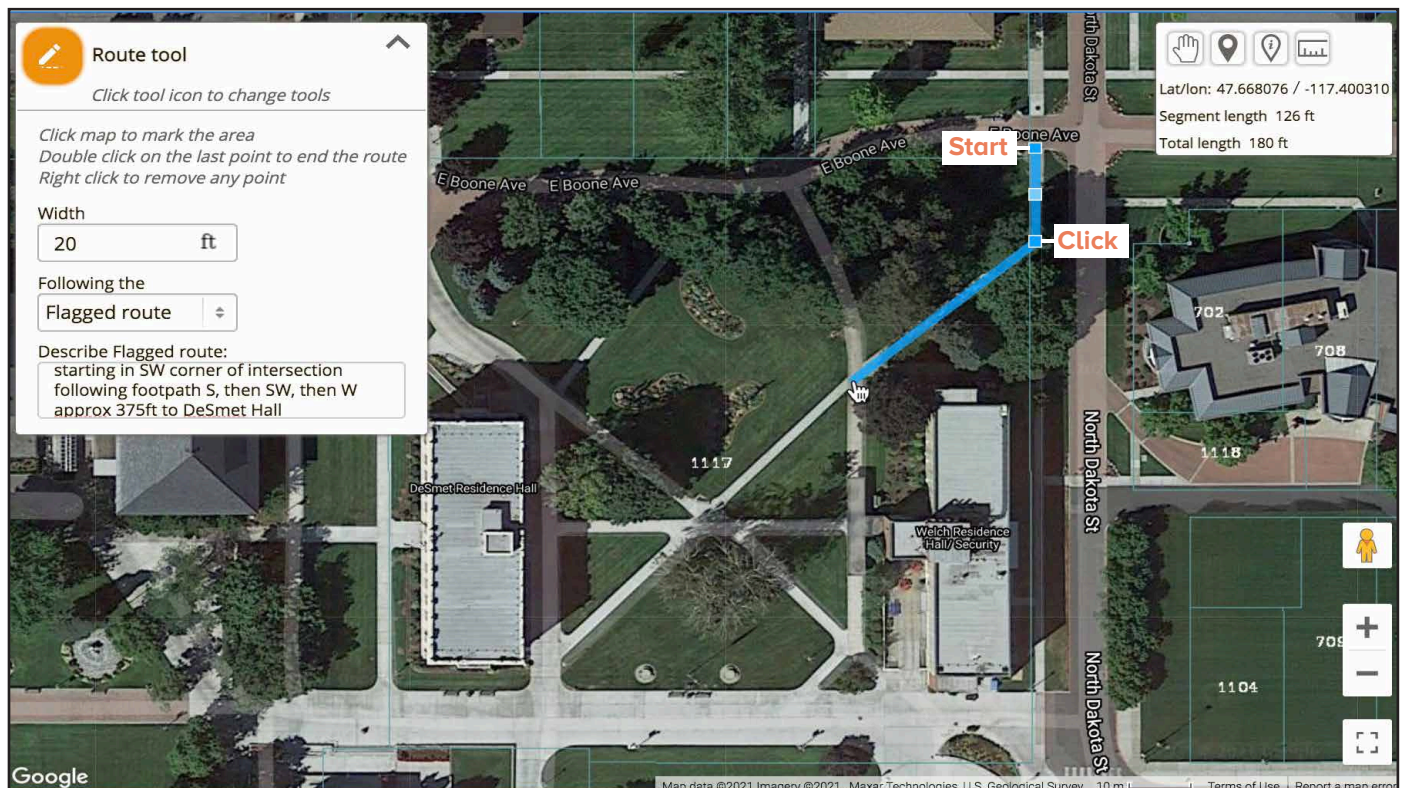

The Route tool allows users to create long, narrow excavation entities. The Route tool is an excellent choice for defining an excavation area when trenching, performing road repair/ replacement, or any other type of work involving a long, narrow excavation area. You can create as many route entities as needed.

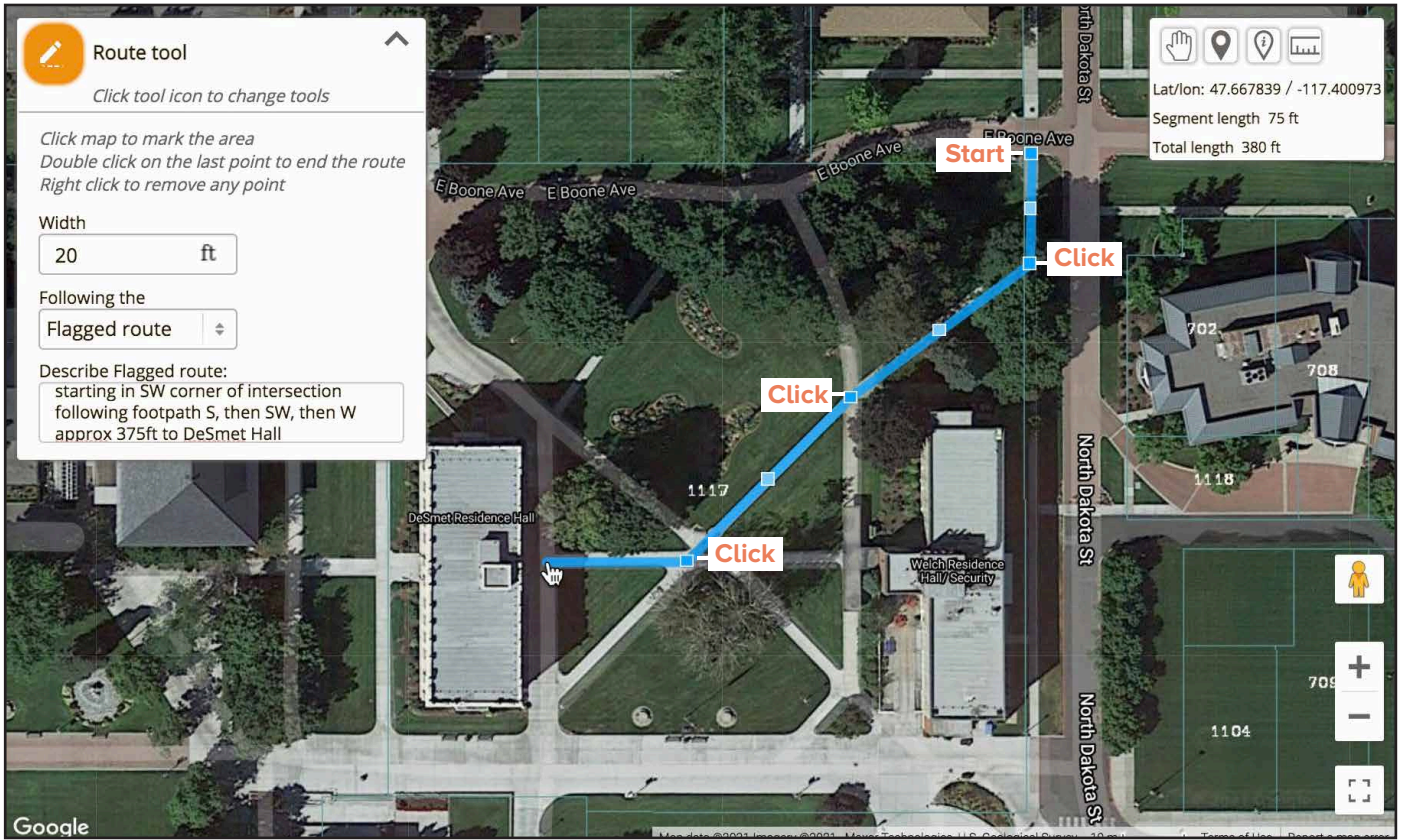

First, access the Drawing Tools menu and choose the **Route Excavation** tool.

Next, enter the width (in feet) needed to contain your work site.

Choose an option from the “Following the” drop-down list. (if none of the provided options fit your type of excavation, choose Custom Response*.)

Now click on the map where you would like to begin your route. Move the mouse to the next turning point in your route and click again. Continue this process until your entire route has been covered, then double-click on the final point in your route.

Property Excavation Tool

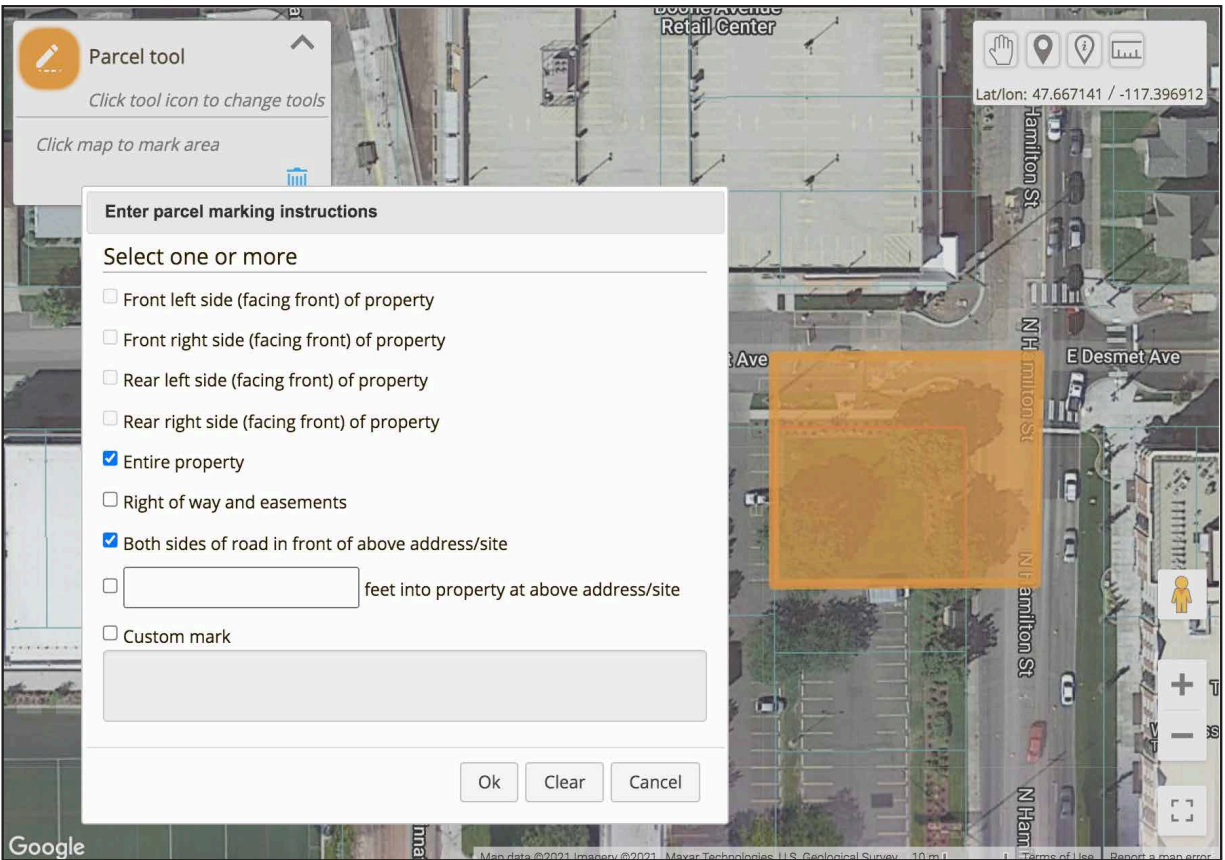

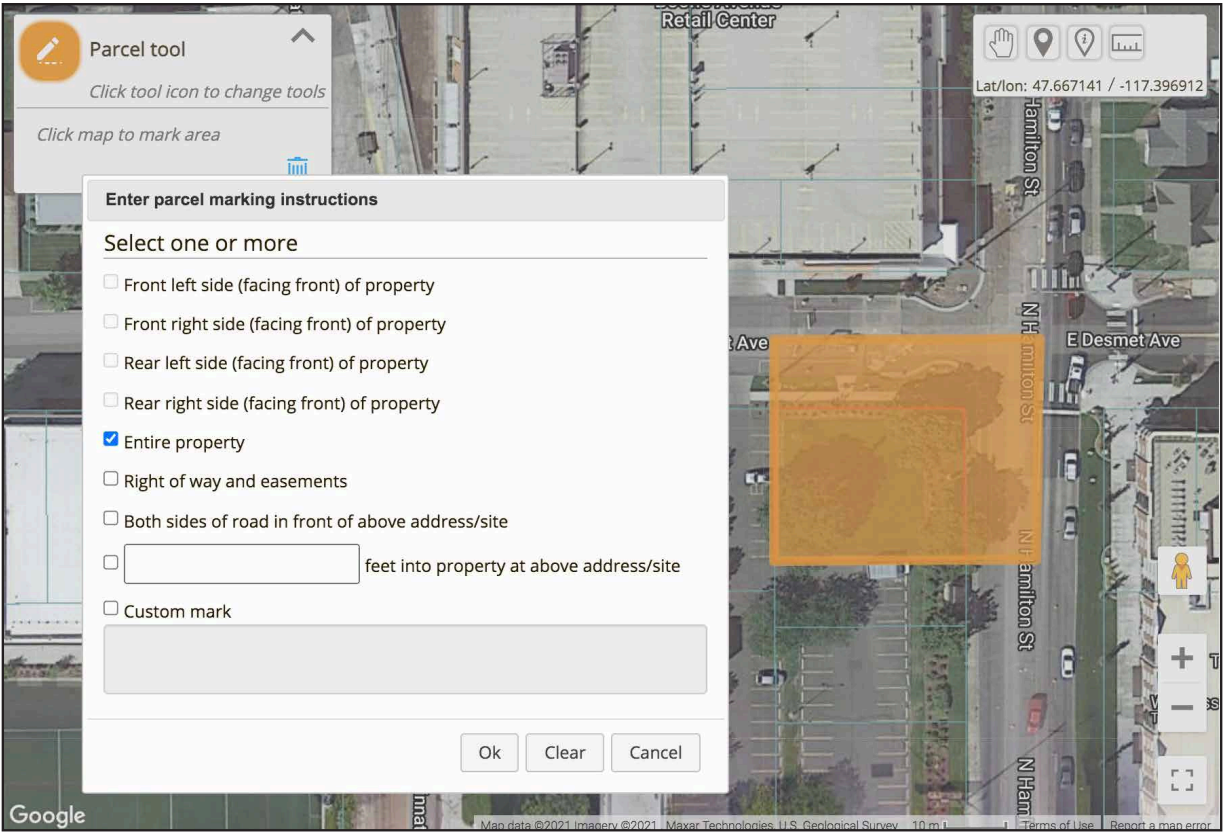

The **Property Excavation** tool allows users to create excavation entities based on available parcel data. You can create as many Property entities as needed. (The Property Excavation tool will only be visible in areas where parcel data is available. Also, the Property Excavation tool will only appear if you are zoomed in close enough on the map. If the Property Excavation tool is not available, first ensure you are zoomed in enough. If still unavailable, please choose a different tool that will contain your entire area of excavation.)

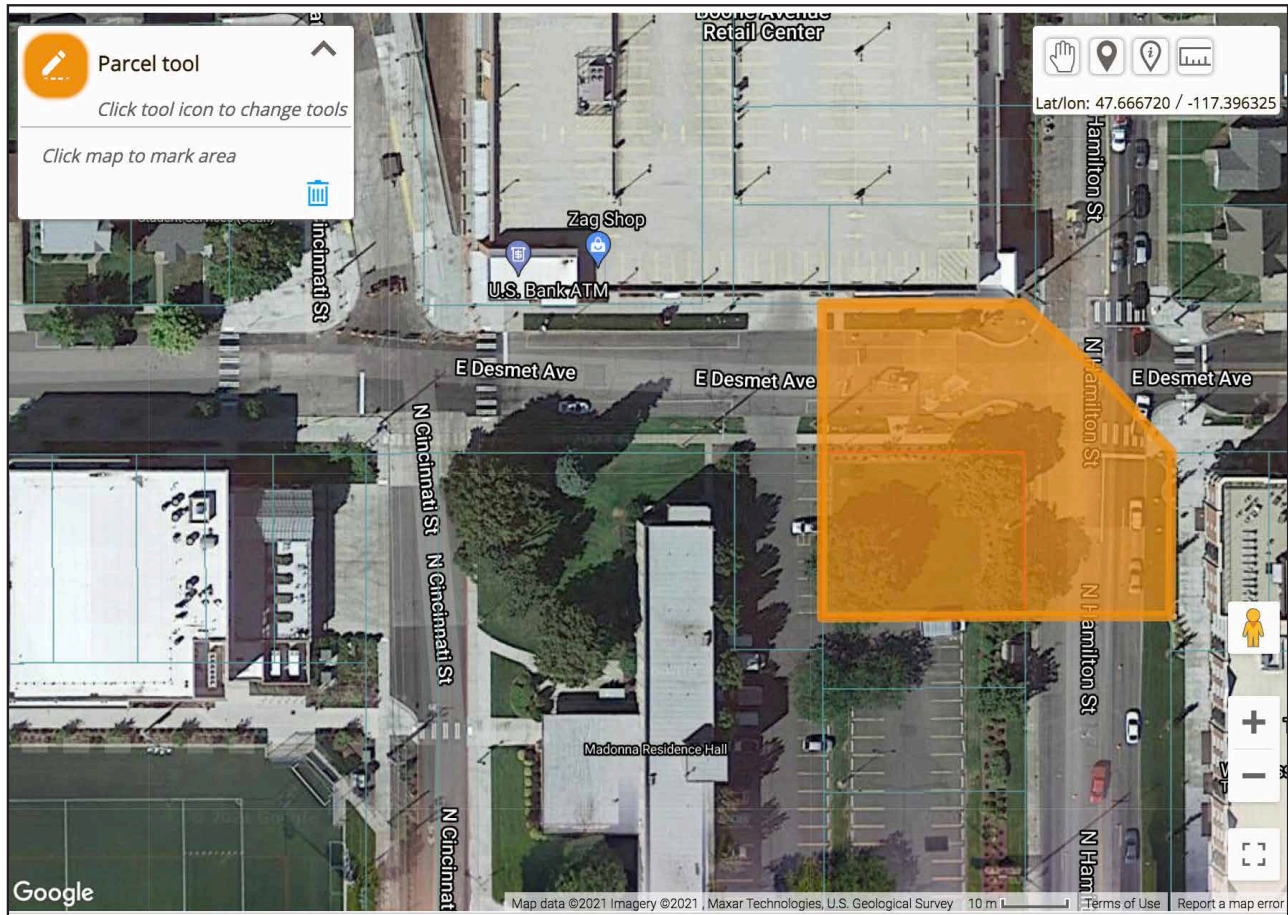

First, access the Drawing Tools menu and choose the **Property Excavation** tool.

Next, click on the address/property where your work will take place. If parcel data is available, you will be presented with the Parcel excavation menu. Review the list and choose the best option(s) for your worksite. Then click OK. If you need to include additional marking instructions, choose the Custom Mark option and enter those instructions.

If you are working in the street or across the street from the address, you must choose the “Both sides of road in front of above address/site” or “___ feet into property at above address/site” option. Choosing either of these options will expand the excavation entity accordingly.

Street Excavation Tool

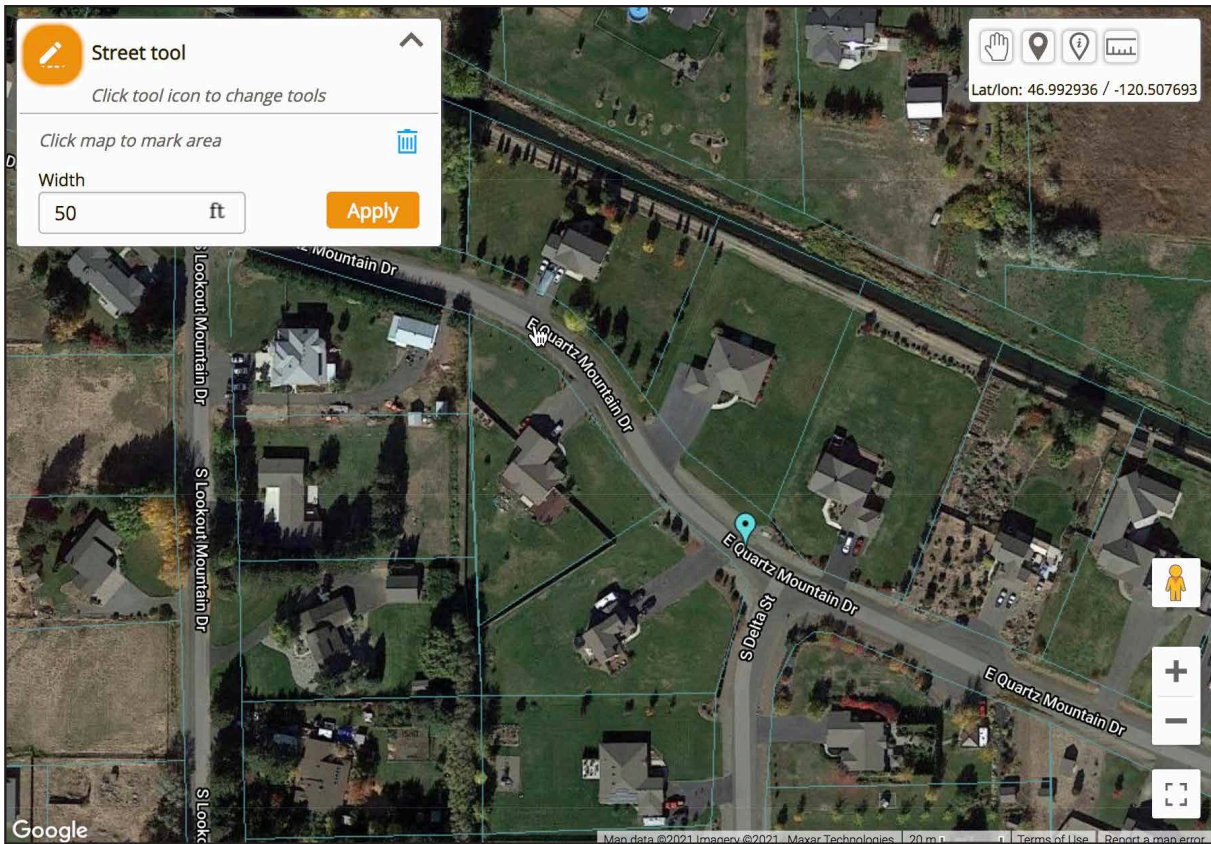

The Street Excavation tool allows users to create excavation entities based on roads and highways. You can create as many Street entities as needed.

First, access the Drawing Tools menu and choose the **Street Excavation** tool.

Next, enter the width (in feet) needed to contain your work site.

Click on the centerline of the road at the starting point of your excavation and then click on the centerline of the road at the ending point of your work*. Clicking the ending point will convert the selected features to an excavation entity with the width you had previously designated.

* When using the Street Excavation tool all work must be limited to one street.

Other Excavation Tool

The **Other Excavation** tool is reserved for situations where no other excavation entity will properly cover the dig site. The Other Excavation tool allows you to “free-hand” draw an excavation entity.

First, access the **Drawing Tools** menu and choose the **Other Excavation** tool.

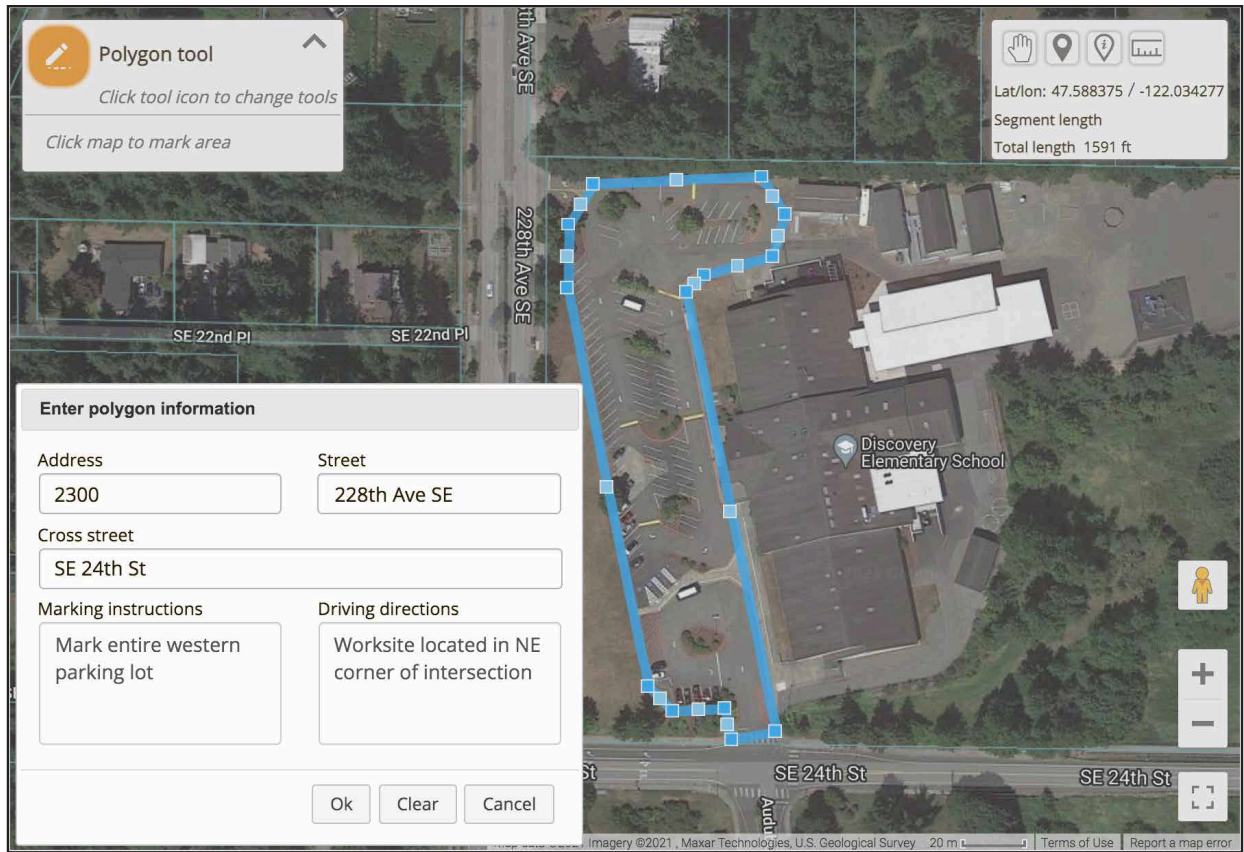

First select the **Other Polygon** button. After reading and dismissing the pop-up message, begin by making a single click on the map where you would like to set your first point.

Continue setting points until you completely encompass the entire area of excavation. To close out the polygon, click on the same point where you began.

You will be presented with a Polygon Information pop-up, which you will need to complete before proceeding further. If you have an address, enter the numerical portion of the address in the Address field and enter the street name in the Street field. Enter the name of the nearest intersecting street in the Cross Street field. Enter the marking instructions (along with any other useful information) in the Marking Instructions field. Finally, enter driving directions in the Driving Directions field. Then click Ok.

PLEASE NOTE: All polygon tickets will be held and reviewed by notification center staff. If the ticket does not contain the necessary information, or if the described area is not contained within the polygon, the ticket will be sent back to you to be processed correctly.

Locator Tickets

The **Locator Tickets** section contains a complete list of all locator tickets received by your account. You can sort them in a number of ways.

The **Released Between** menus will narrow the ticket list based on when the tickets were released.

The **Districts** menu allows you to display only those tickets associated with a specific utility district.

The **Filter by** menu allows you to narrow the ticket list based on **Marking Status**.

Once you've made your menu choices, hit the button to display the new ticket list.

Click [More search options](#) for more precise search options.

Clicking [View ticket map](#) will display the currently selected tickets on the map. This feature can be useful for planning out multiple locating jobs in one trip.

The menu allows you to **Status** or **Print** multiple tickets simultaneously.

Click a **Ticket Number** to view an individual ticket. Viewing an individual Locator Ticket allows you to **Add File Attachments** or access the **Change Status/Locator** menu.

Change Status/Locator Menu

The Change Status/Locator menu is your primary avenue for interacting with a locator ticket. From this menu you may assign a marking status, assign a locator to respond to the ticket and add internal/external notes to the ticket.

District Code

Displays the utility current district code you are working with.

Status Drop-Down Menu

Use this menu to assign a marking status to the ticket.

Status Comments

You may enter status comments in this field. Status comments will be made available to the excavator when the ticket's marking status is updated.

Add Internal Notes

You may use this field to add internal (private) notes to the ticket.

Update Assigned Locator

Use the drop-down menu to select a locator to respond to the ticket. (See page 44 for information on creating locator IDs for your account.)

Update Internal Status

Use this drop-down menu to **Close** or **Open** the ticket.

Add Custom Responses

This area is reserved for any custom responses you have created for your account. (See page 52 for more info.)

Save and...

Use this menu to implement the changes you have made to the locator ticket.

- **Save and Return** will save changes and return you to the ticket list.
- **Save and Stay on Page** will save changes and remain on the current ticket.
- **Save and Go to Next Ticket** will save changes and display the next ticket on your ticket list.

ALERT!: Save your work! If you do not choose an option from the “Save and...” menu, any changes you make to the current ticket will be lost.

Polygon Auto-Assignments

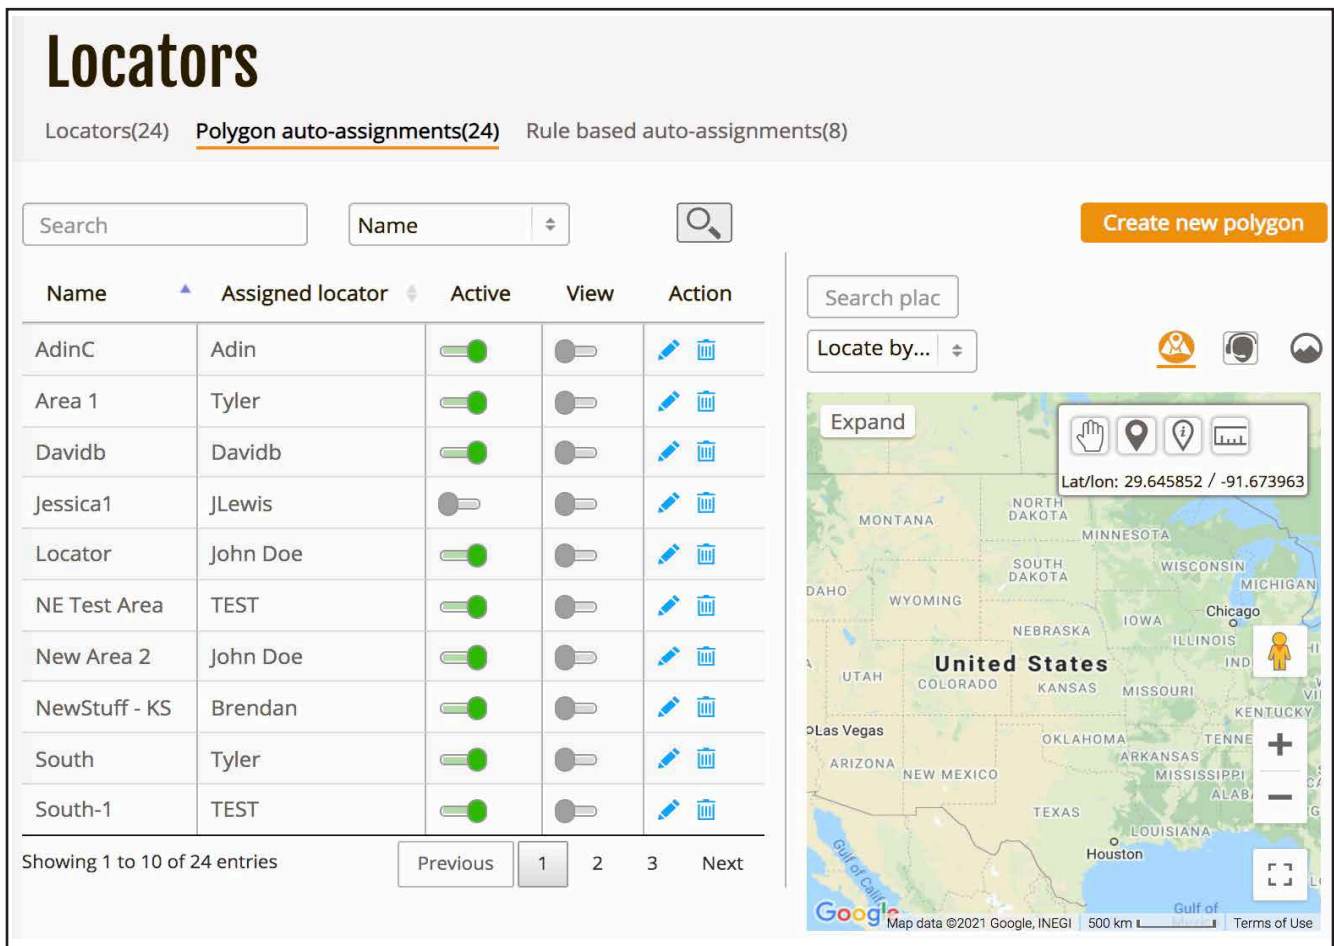

Polygon Auto-Assignments give administrators the ability to automatically assign locate tickets to locators based on the physical location of the work area.

To create a new polygon auto-assignment click the **Create new polygon** button.

Enter a name for the new polygon in the **Assignment Name** field, and select an existing Locator using the **Assigned Locator** drop-down menu.

Find and map out the auto-assignment area using the map interface. Drawing the auto-assignment polygon works the same as the “Other” draw tool in ITIC. (See page 35 for more info) Click the **Save** button to save your changes and move on to the **Edit Polygon Assignment** menu.

Next, assign a locating district to the auto-assignment using the **District Access** menu. Then click **Save** again. That’s it! You can return to this menu at any time by clicking the corresponding **Edit** button () on the **Polygon Auto-Assignments** menu.

The screenshot displays the 'Locators' management interface. At the top, there are three tabs: 'Locators(24)', 'Polygon auto-assignments(24)', and 'Rule based auto-assignments(8)'. Below the tabs is a search bar and a 'Name' dropdown menu. A table lists various locators with columns for Name, Assigned locator, Active status, View, and Action. To the right of the table is a map interface with a 'Search plac' bar, a 'Locate by...' dropdown, and a 'Create new polygon' button. The map shows the United States with a location pin and coordinates (Lat/lon: 29.645852 / -91.673963).

Create Polygon Assignment

Creating an auto-assignment polygon ONLY dictates which tickets a locator will have access to in LTM. Auto-assignment polygons created in this application have no impact on your membership notification area(s). Please contact the Database Department if changes to your membership notification area(s) are needed.

Rule Based Auto-Assignments

Rule Based Auto-Assignments give administrators the ability to automatically assign locate tickets to locators based on information contained in the ticket(s).

To create a new rule-based auto-assignment click the [Create new rule](#) button.

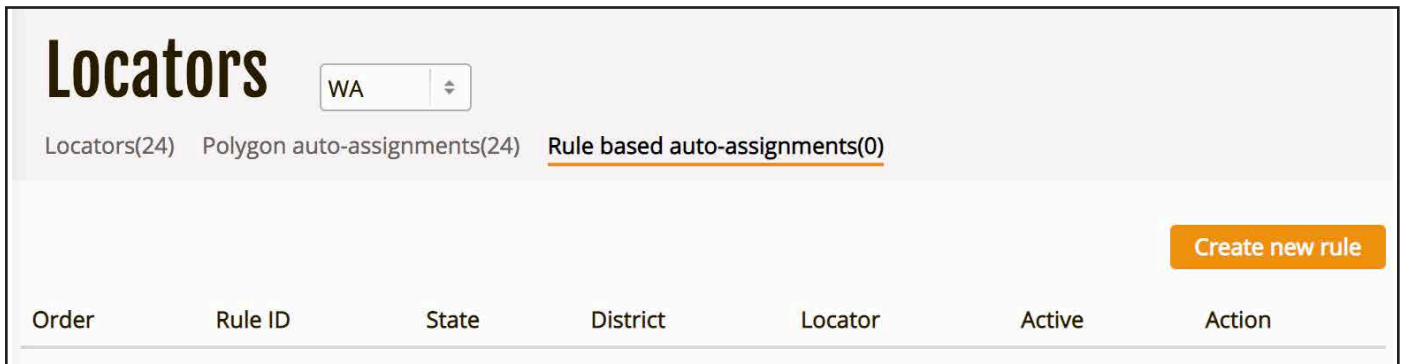

Priority determines the auto-assignments order of operation (if more than one auto-assignment is applicable to a given ticket).

District determines which district will apply to the new rule.

Locator determines which locator will receive the auto-assigned ticket.

Click **Save** when you are ready.

You will be returned to the Rule Based Auto-Assignments menu. You can now add one or more criteria which will trigger the auto-assignment rules. Click **Save** to save your changes.

The screenshot shows the 'Locators' interface. At the top left, the word 'Locators' is displayed in a large font. To its right is a dropdown menu showing 'WA'. Below this, there are three tabs: 'Locators(24)', 'Polygon auto-assignments(24)', and 'Rule based auto-assignments(0)'. The 'Rule based auto-assignments(0)' tab is selected and underlined. In the top right corner, there is an orange button labeled 'Create new rule'. Below the tabs is a table with the following columns: 'Order', 'Rule ID', 'State', 'District', 'Locator', 'Active', and 'Action'.

Locator Ticket Alerts

Locator Ticket Alerts is an optional system that will automatically notify you via SMS (text message), or email when certain types of Locator Tickets are received.

To create a new **Alert** click the **Create new alert** button. This will take you to the **Add Ticket Alert** menu.

District

Use the drop-down menu to select the relevant district code.

Alert Name

Choose a name for the new **Alert**.

You may choose to be alerted via Email, SMS (text) message, or both. If choosing SMS, be sure to select your Mobile Service Provider from the drop-down menu.

Start Time and End Time*

Enter the timeframe you would like to receive alerts. Make sure to enter Start and End Times in the following format:

Start time	End time
<input type="text" value="17:00:0"/>	<input type="text" value="23:59:59"/>

Day(s) of Week:

Use the check boxes to specify what day(s) of the week you would like to receive alerts.

Headers

Use the check boxes to specify the type of ticket(s) that will trigger an alert.

When you are ready, click **Save** . Your new Alert will now appear on the **Locator Ticket Alerts** menu.

Locator Ticket Alerts

Create new alert

Alerts send notification messages via email or SMS when certain ticket types are received by the system.

NOTE: The timeframe for each Ticket Alert cannot cross the midnight (24:00:00) mark. For example, if you wanted to receive a notification anytime an emergency is submitted between the hours of 5pm and 8am, Mon-Fri, you will need to set up two notifications, one for 5pm-11:59:59pm Mon-Fri and another for 12am-7:59:59am Mon-Fri, as shown in this example:

Add Ticket Alert

Notifications created in LTM are provided as an additional tool for users of this application. They DO NOT impact the emergency verification methods that are in place at the call center. Please contact the Database Department if emergency verification contact changes are needed.
Alerts may be sent via email, SMS message or both.

Custom Responses

The Custom Responses menu allows you to create additional questions or other data entry fields on your received Locator Tickets. To create a new **Custom Response** click the  button.

Select the relevant notification district from the drop-down menu.

The **Order** number will determine what order custom responses will appear on the ticket (if there are more than one).

Enter the text of the question in the **Question Text** field.

Choose the type of answer available to the new question. You may choose from **Yes/No**, an open **Number** field, or an open **Text** field.

You can make the new question a required question by ticking the **Required** check box.

You can choose to activate or de-activate the Custom Response by ticking (or un-ticking) the **Active** check box.

You may add additional Custom Response questions by clicking the  button.

Click the  button to save your changes.

Reports

The **Reports** section provides options for running reports on several different aspects of ITICnxt. The types of available Reports will vary depending on your level of customer access, and can be exported in a variety of file formats (.pdf, .xml, etc.). Reports may be accessed via the ITICnxt menu bar on the left side of the page.

Reports		
Report name	Description	Action
Closed Tickets	This report provides a list of closed tickets based on the information entered in the search input. This report includes the ticket number, district code, ticket closed date and time, and user name.	Generate
Custom Response	Allows reporting on the customizable custom response fields.	Generate
District Detail	Provides details by district code per day for the provided date range. This includes a summary of tickets received and statuses made.	Generate
District Summary	Provides the Summary by District Code for the Tickets Received and Statuses provided. This report is for Ticket Check centers.	Generate
Excavator Address	List of company and the excavator addresses. Ticket summary based on the information entered in the search input.	Generate
Open Tickets Due	Lists Open Tickets due today.	Generate
Ticket Check Compliance	This report provides on time, late and not responded tickets for a given timeframe, ticket header(s) and district code(s).	Generate
Ticket Count Report	This report provides counts of tickets.	Generate
Ticket Location	The Ticket Location report provides the list of the tickets, call date/time, address, city/place, latitude and longitude information for a selected district code and date range.	Generate
Ticket Marked	This report will give a complete list of the tickets, header, and the provided statuses with their date and method.	Generate

Quick Notes Menu

The **Quick Notes** feature allows you to create quick note buttons, which in turn allow you to enter commonly used notes in the Notes section of a ticket with a single click.

To create a Quick Note choose an empty quick note slot and fill out the appropriate fields.

Order

The Order field will determine what order the quick notes button(s) appear on the ticket interface.

Button Name

The Button Name field will determine the name of the button as it appears on the ticket interface.

Button Notes

The Button Notes field will determine what information is added in the **Notes** section of the ticket when the quick note button is clicked.

When you are ready, click **Save** to save your changes.

Quick notes

Quick notes are shortcuts that display in the notes area on the ticket detail screen. Create quick notes if the same message is often entered when statusing tickets.

Design Request System

The **Design Request System** allows project designers to receive information about underground facilities at a proposed work site. This section will help designers learn to navigate the web site in order to use the system.

Registered designers can use the **Design Request System** to create a **Design Information Request**.

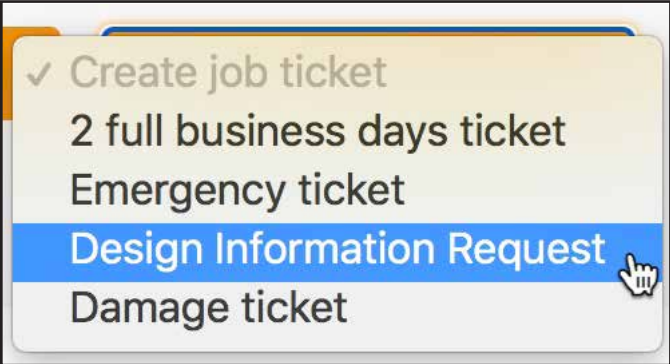

A **Design Information Request (DIR)** provides contact information for facility owners that have underground lines in the area of a design project. Users will be able to enter information about their project, map the area under consideration, and receive contact information for facility owners in the areas of the proposed design.

Design Information Requests are stored in a dedicated sub-menu on the **My Tickets** page.

IMPORTANT: Please note that no excavation can take place on either a Design Information Request. Dig Safe Washington must be notified, and a dig ticket must be filed before any excavation takes place.

Getting Started

The process for filing a Design Information Request is similar to that of a standard 2 full business days ticket. Start by accessing the **Create job ticket** menu and select Design Information Ticket.

Map out the work area normally and click **Next** (see page 24 for more info). When you reach Step 2 you will need to manually enter a description of the proposed work area in the **Remarks** field.

Create Design Information Request

Cancel **Next**
Edit map

1 Mark location 2 Write instructions 3 Review & submit

Job A - ticket 1/1

Enter marking instructions and job details. [Form settings](#)

Ticket type: Design Information Request
